

CMS 3.4 Release

Delivering improved efficiency, functionality and security updates for enterprise deployments.

New to CMS 3.4

Shared playlists for flexibility & reducing content duplication

Content creation teams can now make a single playlist of content and make it available to use in any other layout across a network reducing duplication and promoting content streamlining. In addition, local departments can choose which elements of the playlists to display delivering greater autonomy and flexibility.

Selective channel download reducing storage & bandwidth requirements

As standard storage on SoC screens is typically limited to just 4GB, CMS 3.4 introduces the ability to only download the elements required by the specific display instead of the

entire channel, reducing the impact on users who have large amounts of media in their content channels

Additional SoC compatibility

CMS 3.4 now supports the latest generation of LG webOS 4.0 plus allowing SoC updates to be rolled out on mass to multiple players. Support for Samsung SSP 6.0 is coming soon!

Enhanced security measures

With enhanced security, the system is now fully hardened to a broader range of vulnerabilities such as brute force password attempts with the introduction of additional security protocols. 3.4 also provides Network

Administrators with the ability to set a range of password policies to mitigate the risk of user's credentials being compromised.

Additional feature enhancements

- ◆ New channel preview button
- ◆ Ad-hoc table editing
- ◆ Change layout playlist item for SoC
- ◆ Publish now, activate later for SoC

“We’re delighted to release these updates which are part of ONELAN’s global strategy to invest significantly in the ongoing development of our CMS, ensuring it remains at the forefront of digital signage software technology.”

“This sophisticated solution makes network and content management even simpler and quicker, while delivering an engaging, dynamic experience for users – all key drivers for our continued investment.”

Hugh Coghill-Smith
ONELAN
