

Glass mount install guide

The Reserva Glass mount kit allows users to mount the room sign on a glass partition wall, the kit can be used with 7", 10.1" and 15.6" Reserva displays.

Important: Please note, the adhesive used bonds instantly and the mount cannot be repositioned once placed. Please follow these instructions carefully and make sure all obstructions are clear before placing the mount onto the glass.

01. Use a tape measure to determine where the screen will be installed, use a strip of tape as a marker. We suggest the top edge of the mount is ~160-170cm from the floor.
02. Use spirit level to ensure marker is level
03. Ensure the screen and cabling will not interfere with any other objects e.g. door frames
04. Clean the area below with the included alcohol wipe
05. Once the surface has dried remove the lining from the adhesive pad, carefully align the mount and press it firmly against the glass
06. Press firmly for 30-40 seconds
07. Fit the other bracket plate to the Reserva screen using the screws provided
08. Insert power and LAN cables as required
09. Mount the screen to the wall
10. Secure the mount with the screw on the bottom edge

The Reserva Glass mount kit is not designed to be repositioned. To remove the mount from the glass surface apply heat using a hot air gun and carefully separate with a stripping knife. Once removed it will not be possible to reuse the glass mount.
