

# ONELAN Digital Signage Solutions for Hospitality

Use ONELAN's powerful media players and world-class Content Management System (CMS) to inform, entertain and engage the clientele with outstanding digital signage.

## Why use ONELAN

### Feature Video Walls

Engaging your guests and creating ambience is essential in hospitality. Create eye-catching video walls using ONELAN's 4K players and world-class CMS to deliver live information and a welcoming atmosphere.

Design multi-zone layouts to display local information, offers and live updates or use full screen content across the video wall to captivate guests.

### Ad-Hoc and Folder Mirroring

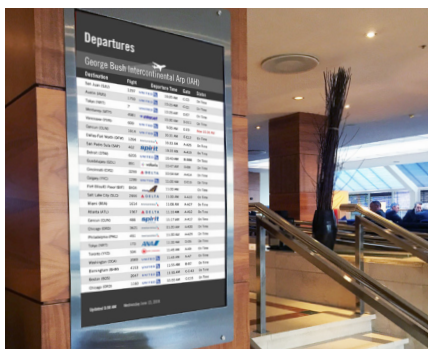

ONELAN's Ad-Hoc feature allows users to update displays and add content with ease. With an intuitive interface, staff can add content such as welcome messages and events directly to specific displays without any prior training.

With the folder mirroring synchronization, images, videos and PDF documents can be added to a layout by simply dragging and dropping the files into a designated folder on the network.

### Ready-To-Use Content

Delivering helpful information through digital signage can significantly enhance guest experience.

ONELAN provides a range of ready-to-use content packages with the CMS to fit into any layouts. These include airport departure boards, train timetables, weather, meeting room summary, international clocks, and many more.
